CHANNEL ISLANDS HAPPY EVERYDAY SPINE-TEK

Created by Britt Merrick from what was initially the Two Happy performance shortboard model, our new Happy Everyday fills a need in every surfer's quiver: the everyday shortboard.

Coming off the heels of CI's Pro Team loving the Two Happy, Britt wanted to draft off its performance attributes but modify it to address the everyday conditions most of us come up against. The kind of conditions where you want to rip and aren't feeling the groveler vibes, and at the same time maybe not quite the epic stuff you would use your high performance shortboard for. To achieve this goal, Britt shortened the rail to create a curvier outline, especially through the tail area. For both the entry and exit rockers he lowered them to increase paddle and planing speeds to cover a broader range of conditions. The single concave under the front foot acts as a gas pedal and generous double concave through the fins provides rail-to-rail ease and plenty of lift in the small stuff.

The CI Pro Team has been loving it, and the design was further validated in the recent Stab in the Dark that featured Taj Burrow in West Oz—not only for the way it looked under his feet but the fact he chose to paddle out on as the wildcard for WSL's Rottneest Islands event.

The Happy Everyday is a great all-around design that sits right between your high performance shortboard (Two Happy) and a step down/groveler (Rocket Wide).

In short, a board designed for high performance surfing on the majority of waves the majority of us surf every day, the Happy Everyday.

Fin system: FCS II - Thruster (3 fins)

- Construction: Spine-Tek Epoxy Construction
- Glass: Standard
- Finish: Sanded

·SPINE-TEK EPOXY CONSTRUCTION·

Engineered by the crew at Shapers Australia, our exclusive SPINE-TEK partnership allows Channel Islands to build boards that are livelier and more responsive. Like a spring, they load up on energy, provide pop, accelerate out of turns whilst holding speed down the line, and the "spine" keeps its flex pattern unlike timber which loses it over time.

All CI surfboards built in their exclusive Spine-Tek epoxy construction have a faster board redirection without losing the flex and memory of the board stringer. This eco board certified construction gives your board the sensitivity and liveliness you were looking for.
