

CJ NELSON CHAMELEON 9'1" LONGBOARD THUNDERBOLT GREY

Code: CJND-CML-TBR-91-GRY

€ 1.649,00

CJ NELSON 9'1" CHAMELEON LONGBOARD GREY THUNDERBOLT

The CHAMELEON knows no boundaries. Not a log, not an HP, but a perfect marriage of the two. Combining everything Ryan and CJ know about long boarding, we blended performance rails with a performance rocker, a wide nose and a blended concave and edge in the tail for control at top speeds. The result is truly special and unique. A board that does it all, in nearly every condition. This board tip rides with the best of them and slices turns on a dime. Take it anywhere and ride it with confidence. Quite possibly the most user friendly longboards in the world today.

Dimensioni: 9'1" x 23 x 3

Volume: 66L

Product Construction: Thunderbolt RED Concept designed by CJ x Ryan Engle

Tail: Square

Fin Configuration: 2+1 Fin System
Fin Plug: Single Fin compatible fin box

FINS NOT INCLUDED

Thunderbolt Red

Fiberglass Lamination Competition Weight and Flex Hand-Crafted

All-round construction that combines classic and high performance. The laminate uses 6oz + 4oz fiberglass for the deck and 6oz + 2oz fiberglass for the bottom. It's lighter than traditional PU longboards, but still has a good amount of weight, so it combines great performance with an old-school longboard feel.

TBR will handle everything from small waves of 1ft to well overhead waves while feeling the ride quality of a longboard. You can enjoy both classic riding and aggressive manoeuvres such as long nose riding, drop knee turns, and spray roller coasters. The red finish is heavier than Surfcorner Store

the black, so it is less affected by choppy conditions with strong winds, making it easier to control.

Thunderbolt Technology

Thunderbolt Technology utilizes advanced materials and technology to decrease weight while enhancing performance, flex characteristics, board control, and durability. Mass-produced epoxy boards are corky and stiff. While light and durable, they simply don't ride well. But Thunderbolt's hand-built boards take superior epoxy materials to an entirely different level. These boards provide the feel and sensitivity of a good poly board but deliver performance far beyond traditional epoxy pop-out constructions. Indeed, those who ride these high-tech epoxy boards claim they actually feel better than polyurethane. Thunderbolt boards are 100% hand layups. They begin with an EPS foam core with multi-component carbon fiber stringer systems that produce engineered flex and twist for a more lively, responsive performance. Proprietary designs employing internal carbon fiber components are then arrayed in the deck and bottom of the deck for precise flex control and strength. The core shield PVC provides flexible protection to increase strength and durability without compromising the flex and twist characteristics built into the blank. With ample carbon fiber and fiberglass in the deck, bottom, and rails, these boards both outperform and outlast traditional PU boards and other epoxy designs.
