FCS II ALBUM TWIN + 1 FIN SET

Designed by Matt Parker for his diverse range of twin fin models, the Album Twin +1 is super drivey and stable. The wide base, together with a robust tip that features a subtle point positioned at the top of the trailing edge, provides a burst of forward acceleration straight from the take-off.

The Album Twin has a neutral sweep but sits quite deep in the water, which offers a very stable feel when driving down the line and performing turns. This also adds an element of control and confidence for the surfer wanting to push this set in steeper sections.

The stabiliser fin mimics the outline of the side fin template and can be added to further enhance the predictability of this set.

"Super drivey with heaps of hold, certainly more stability than other templates in this category, and the tip profile has great forward acceleration." - Matt Parker

Drivey Twin Template
Stable and predictable feel

Twin fin + stabiliser

Performance Glass

Performance Glass (PG) fins are machine-cut from layers of solid fibreglass. These fins are stiff and are widely used by pro-level surfers because the integrity of the flex is maintained under immense force, and in the most extreme of conditions and situations.
