Rail: Boxy

Bottom: Concave into V

Ideal waves: 1-6ft

Level: Beginner – Expert

- Wide nose creates more volume for added buoyancy providing more stability, faster paddling, and easy entry into the smallest waves with quick acceleration.
- Rocker and rail outline are combined with single to double concave bottom, with vee through the tail incorporated into a wide swallowtail.
- The slight hip behind the front fins reduces the area under the back foot creating a pivot point for snappy turns. Boxy and full rails also add to the overall volume and forgiving nature of this model.
- The Protech Fish performance delivers traction, down the line speed and maximum drive over the flattest of sections.
- A tri-fin thruster setup guarantees speed and liveliness, with enough hold to ride out a line.

CARBON FLEX TAIL

Strategically applied to the back end of the rails, the Carbon Flex Tail provides increased durability.

[Carbon Tail patch of the Protech Longboard]

A Carbon Flex Tail is also more responsive than a conventional construction and provides unparalleled flex response in turns. Visible through a small patch on the tail, the carbon layer extends throughout the tail section of the rails.

Protech Fish construction diagram

- Custom laminated finish
 - Secure cell 36g EPS Core
 - 6 + 4 oz deck
 - 6 + 4 oz + 4 oz patch bottom
 - Carbon-reinforced tail patch for exceptional flex control
 - Exceptional value
 - UV-stable resin
-
- Available in NSP's new FTU (compatible with Futures Fin) or twin tab fin boxes on all models.
